COMMUNICATION

The European Patent Office herewith transmits as an enclosure the European search report for the above-mentioned European patent application.

If applicable, copies of the documents cited in the European search report are attached.

☒ Additional set(s) of copies of the documents cited in the European search report is (are) enclosed as well.

The following specifications given by the applicant have been approved by the Search Division:

☒ abstract

☐ title

☐ The abstract was modified by the Search Division and the definitive text is attached to this communication.

The following figure will be published together with the abstract: 1

REFUND OF THE SEARCH FEE

If applicable under Article 10 Rules relating to fees, a separate communication from the Receiving Section on the refund of the search fee will be sent later.

TITLE : COIL END CONTACT COOLING TYPE
DYNAMO-ELECTRIC MACHINE

ABSTRACT : PROBLEM TO BE SOLVED: To provide a large-output and small and light dynamo-electric machine, while avoiding the temperature rise of a stator coil.

SOLUTION: At least the coil end 2d of a stator coil is constituted by laying each axial projection, consisting of a conductor in the shape of a thin plate projecting from the end plate of a stator core in an attitude that the thickness direction is in matching with the diametrical direction of the stator core 1 on top of the other each in diametrical direction. The cooling capacity of the coil end part 2d is raised by providing the dynamo-electric machine with cooling members 8 and 9 of food thermal conductivity which have flat cooling faces sticking fast directly, while being electrically insulated, to the flat main face of the thin plate-shaped conductor on the outermost side diametrical direction or innermost side diametrical direction of this coil end 2d.
